Team Formation and Project Idea

1 – The names of your team members?

Abdulrhman Abdullah AL-Ghamdi

Firas Bukhari 2140472

Ziyad jameel AL-GHamdi

Muhannad Zaman

Amro Baghdadi

2 – What is the general project idea?

Making an Italian restaurant website with a menu and different choices for payment and delivery.

3 – Who are the targeted users?

People that are willing to learn about different cultures and different kinds of food.

4 – What are the main problems we are trying to solve?

Italian culture is not spread in our country, so our goal is to spread Italian food and culture.

5 – How are you going to collect the data from the users?

From a google form survey questions .

6 – How are you going to find users?

We are using social media platforms in the food category .

7 – What interview questions are you going to ask?

Note that: From Q1-Q5 are MCQ and Q6 is a short answer.

Q1/: What is the best name for an Italian restaurant?

Q2/: What should we serve in the restaurant?

 Q3/: What are the best working hours that fit your daily schedule?

Q4/: Should the restaurant contain a delivery service?

Q5/: What style should we follow for the design?

Q6/: Do you have any further suggestions?

8 – The link to your online questioner (using Google Forms)?

https://forms.gle/it5ko1DSDwpuHcKn6

Need finding

Order tracking and instant notifications
Great idea, a new recipe for pizzas
updated menu + points for every order that the customer made, for every 15 points = 1 dish/ meal
Make the menu design easy to use -1 The prices are suitable for everyone-2
Change the name of restaurant to thing start with la …. Like the real Italian restaurant
No
0
🏵 Good luck
Administration should keep its employees always happy

3 – List of 5 needs

1 – The website should include multiple payment methods.
2 – The website should have a clear comprehensive menu that includes a list of all the dishes and drinks that are available.
3 – The website should allow the customer to make reservations online .
4 – Location and contact information should be included.
5 – The user needs to make an account to be able to place an order.

4 – List of 5 insights

1 – Offering multiple payment methods will make it easier for customers to pay for their orders.

2 – A visually appealing menu with clear pricing and descriptions will help customers make informed decisions about their orders.

3 – Online reservations will allow customers to plan their visits to the restaurant in advance.

4 – Providing location and contact information will make it easier for customers to find and get in touch with the restaurant.

5 – Prompting users to create accounts will allow them to save their preferences and order history, making future orders faster and more convenient.

5 – Based on the needs and insights, define 5 tasks that your application will perform to meet the user needs.

1 – The website will offer multiple payment methods for the user to pay with.
2 – The website will have a clear menu that shows all the dishes and their prices.
3 – The website will have a reservation feature.
4 – The website will include all necessary contact and location information to allow the user to get in touch with the restaurant.
5 – The website will ask the user to create an account to be able to place an order .
